**Subject:** FJ Doyle Update - Post Shutdown

I put the following in the weekly but wanted to send it to you by email as well.

**F.J. Doyle Salvage, Leonard, Fannin County, TX:** The F.J. Doyle Salvage Site is a former transformer dismantling facility that operated from the mid-1970's to 1999. The operations resulted in the release of PCB transformer oil to the soil by spillage and by the purported use of the oil as weed killer. The EPA Team mobilized to the site on November 5, 2018 and has completed excavation on 45 of 53 grids which encompass 3 residential properties, industrial property, alleyway, and drainage ditches. The Team is concurrently restoring completed excavated grids with 21 of 53 completely restored and 11 of 53 partially restored. As of January 25, the Team has disposed of 4553 tons of non-TSCA soils, 1488 tons of TSCA soils, 181 tons of C&D Debris, and 3 Drums of Oil. The project has resulted in damage to city asphalt streets which were in poor shape at the start of the project but will have to be resolved upon completion of the project. The team is expecting completion of the project by mid to late February.
